

Auto Ticket Classification using Flow Designer

1. Ideation Phase

Problem Identification

- Service teams receive many tickets with different descriptions and priorities.
- Manual classification can be time-consuming and inconsistent.

Proposed Idea

- Automate ticket classification using ServiceNow Flow Designer.
- Use ticket information and predefined conditions to classify and route tickets.

Objectives

- Reduce manual effort.
- Improve consistency in classification and routing.
- Create a maintainable workflow.

Expected Outcome

- A working automation that processes eligible tickets and applies the configured classification and routing logic.
