

Auto Ticket Classification using Flow Designer

5. Project Development Phase

Development Steps

- Create the classification flow.
- Configure the trigger.
- Add classification conditions.
- Configure actions to update or route tickets.
- Add a fallback path.
- Validate and test the flow.

Development Focus

- Use clear, maintainable conditions.
- Avoid unnecessary actions.
- Do not overwrite unrelated ticket information.

Expected Result

- The Flow Designer automation processes eligible tickets according to the defined classification rules.
