

Auto Ticket Classification using Flow Designer

6. Project Documentation

Project Description

- Auto Ticket Classification using Flow Designer is an automation project intended to reduce manual effort in classifying and routing service tickets.

Workflow Documentation

- Document the trigger, ticket fields, classification conditions, actions and fallback path.

Testing Documentation

- Record test inputs, expected results and actual results.
- Document corrections made during testing.

Maintenance

- Review classification conditions when ticket categories or routing requirements change.
- Add new rules through Flow Designer when required.
