

Auto Ticket Classification using Flow Designer

7. Project Demonstration

Demonstration Steps

- Open the ServiceNow environment.
- Create or select a sample ticket.
- Show the Flow Designer trigger, conditions and actions.
- Run the flow and show the ticket result.
- Demonstrate another classification path.
- Show fallback behavior for an unmatched ticket.

Points to Explain

- Why automation is used.
- How Flow Designer connects triggers, conditions and actions.
- How automation improves consistency and reduces repetitive work.
- How additional rules can be added.

Expected Result

- The audience can see a ticket move through the configured classification workflow and receive the intended automated result.
